- Contribute to development of market access and pricing strategic capabilities in the Asian Pacific Rim region.
- Creates strategic partnerships with external networks and individual experts, which can influence prescribing policy/protocol position.

PERSONAL

Mr. De Medici's goals at the present time are: a) working collaboratively and cooperatively with light workers of the planet to design, develop, and deploy businesses and business practices; and b) exploit his writing and creative skills by the creation of literary works in fiction, non fiction, screenplays, and poetry. He's a prolific writer with a new book seeking publication status that has the title, "Zero Point Consciousness". The essential idea of the book is that the philosophical prosperities of zero together with its embedded concept of 'zero point energy' is a signal of a new paradigm emerging upon the cultural landscape of our society. It convincingly shows how this emerging paradigm is changing the way we view ourselves and the universe as similarly as previous scientific ideas have done in the past. The book offers compelling insight of ways in which this emerging view is reshaping government, business, and society. Having been analyzed from the multidisciplinary fields of physics, mathematics, philosophy, theology, art, and literature, it offers compelling insights that will enable the reader to gain a renewed sense of purpose showing that zero represents a state of being from which, when properly accessed can be an insurmountable source of power to transform our lives, experience genuine meaning in our lives and extraordinary depth in our relationships. Mr. De Medici is also an eclectic chef specializing in vegetarian and meat cuisines of the Italian, Mediterranean, Asian, Indian, and Caribbean culinary dishes.

He has been involved in the design, development, and deployment of sustainability development initiatives for underdeveloped and developing countries of Africa and the Pacific Rim, such as the Marshall Islands, Micronesia, Solomon Islands, & Papua New Guinea.

Present focus is on sustainable businesses for urban and rural communities throughout North America and other countries. He is currently working as a business analyst and Systems Design Engineer in New York City, pursuing his Masters and Doctorate degrees in Systems Design Engineer, Business Administration, and International Law, working collaboratively and cooperatively with environmental scientists in writing science journals, developing clean tech initiatives for environmental remediation in various parts of the world and currently practices Orthodox Judaism and the Science of Spirituality.
